PILLAR 3 DISCLOSURES

OVERVIEW

Bank Negara Malaysia (“BNM”)’s Risk-Weighted Capital Adequacy Framework (“RWCAF”) (Basel II) – Disclosure Requirements (Pillar 3) aims to improve the transparency of financial institution activities and risks, which is a key element of an effectively supervised financial system.

Pillar 3 Disclosures is governed by BNM RWCAF - Pillar 3 and Capital Adequacy Framework (Capital Components) issued by BNM, which spells out the guidelines in determining the contents (including materiality, appropriateness and confidentiality), frequency, medium, location of public disclosures, as well as internal controls over the disclosure verification process.

The following disclosure information is based on 31 December 2022 financial year end data and has been independently reviewed by the Internal Audit Department. However, where the disclosure is reliant upon the disclosure in the Bank’s audited financial statements, the disclosure in the audited financial statements has been subjected to the formal review and verification process by the external auditor.

The Pillar 3 Disclosures is published on the Bank’s corporate website at <http://www.affinhwang.com>

Affin Hwang Investment Bank Berhad

PILLAR 3 DISCLOSURES

1 SCOPE OF APPLICATION

The Pillar 3 Disclosures attached herewith relates to the Bank and its subsidiaries (“the Group”) and is published for the financial year ended 31 December 2022, with comparative information for both the Bank and the Group for the financial year ended 31 December 2021.

For financial reporting purposes, the basis for consolidation of the Group financial statements is in accordance with the Malaysian Financial Reporting Standards.

The basis for accounting consolidation is disclosed in Summary of significant accounting policies for the financial year ended 31 December 2022: Note B - Consolidation of the financial statements of the Group for the financial year ended 31 December 2022. Further information on the Bank’s consolidated entities can be referenced to Note 12 of the Bank’s and the Group’s financial statements.

The principal activities of the Bank are in investment banking, stockbroking activities, dealing in options and futures and related financial services.

The principal activities of the subsidiaries are investment holdings, trustee services and nominee services. There were no significant changes in the nature of these activities during the financial year, except for the discontinued operations as disclosed in Note 42 to the financial statements.

During the financial year, the Group did not encounter any restriction or impediment in the distribution of dividends, transfer of funds or regulatory capital.

There were no capital deficiencies in any of the subsidiaries of the Group as at financial year ended 31 December 2022.

2 CAPITAL MANAGEMENT

2.1 Internal Capital Adequacy Assessment Process ('ICAAP')

In line with the BNM guideline on Risk-Weighted Capital Adequacy Framework - Internal Capital Adequacy Assessment Process (ICAAP) (Pillar 2), the Group and the Bank have instituted the ICAAP Framework (“Framework”) to assess the overall capital adequacy in relation to the nature, size and complexity of the Group and bank that impacts the institutional risk profile. The Framework aims to ensure that the Group and the Bank are able to maintain healthy capital levels to support strategic business priorities and forward-looking risk assessment in order to ensure that capital demand and supply is considered for both business as-usual and stressed conditions.

The Group and the Bank’s capital management approach is anchored in the integration of risk management and capital planning process. The Group and Bank operate within a Board approved Risk Appetite that ensures that business growth is done in a responsible and sustainable manner.

A key aspect of the risk management process on an enterprise-wide basis is the annual comprehensive risk assessment is undertaken by the Group and the Bank to identify and measure the following risks:

- Risks captured under Pillar 1 (credit risk, market risk and operational risk);
- Risks not fully captured under Pillar 1 (e.g. model risk); and
- Risk types not covered by Pillar 1 (e.g. credit concentration risk, interest rate risk/rate of return on banking book, reputation risk, business and strategic risk, amongst others).

Material Risk Assessment (MRA) is conducted as part of the ICAAP to identify material risks of the Group and the Bank spanning across retail, commercial, investment banking and business operations. The identification of material risks are aimed to ensure that the Group and Bank are aware of the potential downside impact that are associated with the day-to-day running of the business. The identification of risks allows for robust management of the potential impact in the event the material risks crystalize. For each material risk identified, the Group and the Bank will ensure appropriate risk mitigation is in place and conduct regular risk monitoring to manage the risk. The management of risk across the Group and the Bank is facilitated by the Risk Management Process and it’s embedded through various risk policies and frameworks across the entities.

The Group and the Bank’s stress testing process is guided by the Group’s Stress Testing Policy. Stress testing is an essential risk management tool to assess a banking institution’s potential vulnerabilities to stressed business conditions. It involves identifying possible events or future changes in the financial and macroeconomic conditions that potentially have unfavorable effects on the Group and Bank’s exposure and ability to withstand such changes usually in relation to the resilience of its capital, earnings sustainability and liquidity strength.

PILLAR 3 DISCLOSURES

2.1 Internal Capital Adequacy Assessment Process ('ICAAP') (continued)

It forms an integral part of the ICAAP and risk management process, enabling the Group and the Bank to assess the impact on its capital adequacy in line with supervisory expectations and requirements.

2.2 Capital Adequacy Ratios

The capital adequacy ratios of the Group consist of total capital and risk-weighted assets derived from the consolidated financials of the Group. The Group and the Bank have adopted the following approaches to assess its regulatory capital requirements under BNM RWCAF Pillar 1:

- i) Credit risk (Standardised Approach)
- ii) Market risk (Standardised Approach)
- iii) Operational risk (Basic Indicator Approach)

The total capital and capital adequacy ratios of the Group and the Bank are computed in accordance with BNM Capital Adequacy Framework (Capital Components) Policy updated on 9 December 2020.

As permitted under the Capital Adequacy Framework (Capital Components) Policy updated on 9 December 2020, the Group and the Bank have elected to apply transitional arrangement for four financial years beginning on 1 January 2020. Under the transitional arrangement, the amount of loss allowances measured at an amount equal to 12 months ECL and lifetime ECL to the extent they are ascribed to non-credit-impaired exposures (i.e. Stage 1 and Stage 2 provisions), are added back in the calculation of CET1 capital ratio.

In line with the Capital Adequacy Framework (Capital Components) Policy, the minimum capital adequacy requirement for Common Equity Tier 1 Capital Ratio ("CET 1") and Tier 1 Capital Ratio are 7.0% (2021: 7.0%) and 8.5% (2021: 8.5%) respectively for the financial year ended 31 December 2022. The minimum regulatory Total Capital Ratio remains at 10.5% (2021: 10.5%).

PILLAR 3 DISCLOSURES

2.3 Capital Structure

Regulatory capital is categorised into Common Equity Tier 1 ("CET 1") Capital, Additional Tier 1 Capital and Tier 2 Capital which are further described below:

CET 1 Capital

CET 1 Capital /Tier 1 Capital (Basel III) comprises ordinary paid-up share capital, statutory reserve, audited retained profits, other disclosed reserves, unrealised gains / losses on Fair Value through Other Comprehensive Income ("FVOCI") instruments and net of regulatory adjustments (namely goodwill, intangible assets, 55% of cumulative gains on FVOCI instruments, deferred tax assets, other CET 1 regulatory adjustments specified by BNM, investment in subsidiaries and investment in associates).

Share capital is the issued and fully paid share capital, with no obligation to pay a coupon or dividend to the shareholders. Retained profits and statutory reserve are accumulated reserves reported under Total Equity in the Statement of Financial Position.

Additional Tier 1 Capital

Additional Tier 1 Capital comprises of qualifying non-controlling interest in the Bank's consolidated entities.

Tier 2 Capital

Tier 2 Capital comprises of expected credit losses for financial assets, subject to a maximum of 1.25% of total Credit Risk Risk-Weighted Asset ("RWA").

PILLAR 3 DISCLOSURES

3 RISK MANAGEMENT

As a full-fledged investment bank, the Bank has in place, a robust and comprehensive risk management framework and policies, which are based on best practices, to ensure that the risk elements in the operations of the Bank are adequately managed and mitigated. The Bank's framework for the management of financial risks is congruent with the primary corporate objective of creating and enhancing shareholder's value, guided by a prudent and robust framework of risk management methodologies and policies.

The Bank's risk management framework and policies are reviewed periodically to ensure that they are comprehensive in addressing the multi-faceted risks associated with the investment banking sector.

The Risk Management Department ("RMD") is primarily responsible for the development and maintenance of the risk management framework and policies of the Bank and supports the functions of the Asset and Liability Committee ("ALCO"), Compliance and Risk Oversight Committee ("CROC"), Board Risk Management Committee ("BRMC") as well as Group Board and Management committees of the Affin Banking Group.

Risk Governance

Appropriate risk governance structure is cascaded throughout all levels of the Bank which comprise the Board of Directors ("Board"), relevant committees, business units and support units.

The Board is ultimately responsible for assuming the risks inherent in the Bank's business activities and defining the policies for governing those activities. BRMC is responsible to support the Board in the oversight of the Bank's risk management framework and policies.

BRMC is authorised by the Board in overseeing all risk-taking activities in the Bank. Its key responsibilities involve reviewing and recommending risk management strategies, risk tolerance, new products, capital allocation process; and assessing the adequacy of risk management policies, framework, infrastructure and resources for implementation of risk strategies. For monitoring purpose, BRMC reviews periodic reports on risk exposures, risk portfolio composition and risk management activities. These reports are prepared by RMD and cover credit, market, liquidity, operational and technology risks.

At management level, CROC and ALCO assist the BRMC and the Board in their supervisory roles in the management of credit, market, liquidity, operational and technology risks as well as assets and liabilities management of the Bank. These two committees provide an executive forum for discussions and decisions on all aspects of credit, market, liquidity, operational and technology risks, as well as assets and liabilities management matters.

Under the Credit Authority Framework approved by the Board, the Group Management Credit Committee ("GMCC") is authorised to approve or reject application of loans and other credit facilities as well as other related credit proposals submitted after due process of checking, analysis, review and recommendation by Group Credit Management ("GCM") and/or AHIB Credit Management ("Credit Management"). GCM and/or Credit Management provides independent review and oversight of credit requests within its approving authorities, prior to recommending to GMCC/GBRCC or Board for its decision. Impaired credits are independently managed by the Credit Resolution Committee ("CRC").

Internal Audit provides reasonable assurance on the adequacy and effectiveness of internal control systems of the business and support units, examines adherence to policies and procedures and assesses compliance with external laws and regulations.

RMD acts as an independent and neutral party in providing comprehensive and independent views of Bank-wide risks.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Risk Measurement

The risk measurement tools employed by the Bank are commonly used in market practices and commensurate with the size and complexity of the Bank's business operations.

Stress Testing

The Bank has deployed stress testing methodology in assessing the impact of stressed market conditions on its capital, profit, liquidity and asset quality in accordance with the Group Stress Test Framework and Methodology.

Stress testing results are periodically reported to ALCO, BRMC and Board, to enable them to consider the implications on the Bank's overall business strategy, capital management, risk profile and to consider appropriate corrective measures when necessary. The stress testing is also performed periodically to meet both internal and regulatory external reporting requirements.

Internal Audit acts as an independent party in performing an annual review of the Bank's stress testing policy, procedures and processes including the stress scenarios used to ensure the quality and effectiveness of the programme.

The stress testing methodology covers a range of risks and business areas and there are two types of stress testing currently in use:

- Sensitivity Analysis, which moves a single risk factor by a magnitude of shock. This method can be processed relatively quickly and can be used to form a first approximation and assessment of the impact.
- Scenario Analysis, which contains simultaneous moves in a number of market risk factors (e.g. equity prices, interest rates, foreign exchange rates and etc.). A stress test scenario analysis can be based on a combination of historical scenario, hypothetical scenario, forward looking scenario and second round/spill-over effect. Scenario analysis can be performed on a portfolio-driven approach or event-driven approach.

Risk Reporting and Monitoring

The Bank's risk appetite (i.e. risk tolerance) and business plans determine the amount of risk capital set aside (i.e. risk capacity) to support its operational and market activities as well as capital allocation to the respective business units. This forms the basis in setting risk limits for business units.

RMD is responsible for the monitoring and timely reporting of risk exposures against the established risk limits. Any breaches in risk limits are subject to the exception escalation procedures that aim to rectify any excesses within a reasonable time frame and within the specified authority level. There is a formal process for risk reporting to the Chief Executive Officer, business units, relevant management/ board committees to facilitate the making of informed decisions and strategies. BRMC reviews and monitors any significant risk issues and reports to the Board.

Risk limits are reviewed on an annual basis or as and when required, to ensure their relevance with regards to the risk taking activities of the Bank and the prevailing regulations.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

4 CREDIT RISK

Credit risk is the risk that a counterparty will fail to meet its contractual obligations which could result in a financial loss to the Bank. The Bank's exposure to credit risks arises primarily from stockbroking trade receivable, corporate lending, share margin financing, securities borrowing and lending, corporate/inter-bank lending activities, bond/sukuk investments, foreign exchange trading, equity and debt underwriting as well as from participation in securities settlements and payment transactions.

Risk Governance

The management of credit risk is governed by a set of approved credit policies, guidelines and procedures to ensure that the overall lending objectives are in compliance with internal and regulatory requirements. The risk management policies are subject to review by BRMC, a sub-committee of the Board that reviews the adequacy of the Bank's risk framework and policies.

The Bank's credit risk framework is further strengthened through an established process for the approval and review of proposals that comprises of Group Management Credit Committee ("GMCC") and Group Board Credit Review and Recovery Committee ("GBCRRC"). The GMCC represents the approving authority for credit and underwriting proposals, whilst GBCRRC is the committee that reviews proposals that exceed specified limits and criteria, as well as to consider whether to veto the approval by GMCC on the proposal or modify the terms of the proposal.

The Bank recognises that learning is a continuous journey and is committed to enhancing the knowledge and skills set of its staff. It places strong emphasis on creating and enhancing risk awareness in the organisation. The Bank is supportive of credit officers in taking the relevant credit-related certification programme such as the Chartered Banker Program offered by the Asian Institute of Chartered Bankers ("AICB"). Upon attaining the relevant certification, credit officers are expected to demonstrate sound understanding of credit process and competence to undertake credit roles and responsibilities.

Credit Risk Evaluation

(a) Corporate Credit and Financing

Credit evaluation is the process of analysing the creditworthiness of the prospective customer against the Bank's underwriting criteria and the ability of the Bank to make a return commensurate to the level of risk undertaken. A critical element in the evaluation process is the assignment of a credit risk grade to the counterparty. This assists in the risk assessment and decision making process. The Bank has developed internal rating models to support the assessment and quantification of credit risk.

A number of qualitative and quantitative factors are taken into consideration in the identification and analysis of a counterparty's credit risk. Each counterparty is assigned a credit rating which considers factors such as competitive position, operating performance, cash flow strength and management strength.

All corporate lending, underwritings and corporate debt securities investments are independently evaluated by the Bank's credit management function and approved by the relevant approving authorities based on the Authority Manual approved by the Board.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

(b) Stockbroking

For the Bank's stockbroking business, daily management and monitoring of credit risk associated with securities brokerage is undertaken by Credit Control team to ensure compliance with approved policies and procedures of the Bank and regulatory requirements.

In addition, RMD reviews the overall stockbroking credit exposures and CMD assess/approve trading limit proposals that exceed specified limits. The assessment is based on clients and/or dealer's representatives risk profiles, creditworthiness, past trading records and pledged collaterals.

(c) Share Margin

For share margin financing, all new margin applications as well as applications for increase in facility limits are subject to credit review by the Margin Operations. It will be forwarded to CMD for independent credit evaluation if the proposals exceed specified limits before recommending to the Approving Authorities. Credit risk exposures associated with share margin trading are reviewed and monitored closely on daily basis by designated staff from Margin Operations, Credit Management and independently by RMD, who will review amongst others, credit limit utilisation, exposure to single security or client/group of counterparty and equity positions against collateral.

Credit Risk Limit Control and Mitigation Policies

The Bank employs various policies and practices to control and mitigate credit risk.

The Bank establishes internal limits and related lending guidelines to manage large exposures and avoid undue concentration of credit risk in its credit portfolio. The limits include single counterparty exposure, connected parties and industry segments. These risks are monitored regularly and the limits are reviewed annually or sooner depending on changing market and economic conditions.

The credit risk exposure for derivatives due to potential exposure arising from market movements, and loan books are managed on an aggregated basis as part of the overall lending limits with customers.

Credit Risk Measurement

Credit risk grades

The Bank allocates each exposure to a credit risk grade based on a variety of data that is determined to be predictive of the risk of default and applying experienced credit judgement. Credit risk grades are defined using qualitative and quantitative factors that are indicative of the risk of default. These factors vary depending on the nature of the exposure and the type of borrower.

Credit risk grades are defined and calibrated such that the risk of default occurring increases exponentially with the deterioration of credit risk. For example, the difference in risk of default between credit risk grades 1 and 2 is smaller than the difference between credit risk grades 2 and 3.

Each exposure is allocated to a credit risk grade at initial recognition based on available information about the borrower. Exposures are subject to ongoing monitoring, which may result in an exposure being moved to a different credit risk grade. The monitoring typically takes into consideration a number of relevant factors when identifying and analysing of counterparty credit risk. These factors determines the credit rating under the Credit Risk Grading Policy, which considers factors such as competitive position, operating performance, cash flow strength and management strength. The Bank's leverages on its holding company's Affin Bank Berhad's models for loans, advances and financing and bonds.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Determining whether credit risk has increased significantly

The criteria for determining whether credit risk has increased significantly vary by portfolio and include quantitative changes in PDs and qualitative factors, including a backstop based on delinquency.

The credit risk of a particular exposure is deemed to have increased significantly since initial recognition if, based on quantitative modelling, the remaining lifetime PD is determined to have increased by more than a predetermined percentage/range.

Using expert credit judgement and, where possible, relevant historical experience, the Bank may determine that an exposure has undergone a significant increase in credit risk based on particular qualitative indicators that it considers are indicative of such and whose effect may not otherwise be fully reflected in its quantitative analysis on a timely basis.

As a backstop, the Bank considers that a significant increase in credit risk occurs no later than when an asset is more than 30 days past due. Days past due are determined by counting the number of days or month since the earliest elapsed due date in respect of which full payment has not been received. Due dates are determined without considering any grace period that might be available to the borrower.

The Bank monitors the effectiveness of the criteria used to identify significant increases in credit risk via regular reviews to confirm that:

- the criteria are capable of identifying significant increases in credit risk before an exposure is in default; and
- there is no unwarranted volatility in loss allowance from transfers between 12-month PD (Stage 1) and lifetime PD (Stage 2).

Measurement of Expected Credit Loss ("ECL")

The Group and the Bank use three categories for recognising ECL:

Category	Definition	Basis for recognising
Performing accounts (Stage 1)	<ul style="list-style-type: none"> • Financial assets that do not have significant increase in credit risk since initial recognition of the asset and therefore, less likely to default; • Performing accounts with credit grade 13 or better; • Accounts past due less than or equal to 30 days; or • For early control accounts that have risk or potential weakness which if left unchecked, may result in significant deterioration of repayment prospect and transfer to Underperforming status (Stage 2) or worse. 	12 months ECL
Underperforming accounts (Stage 2)	<ul style="list-style-type: none"> • An account with significant increase in credit risk since initial recognition and if left uncorrected, may result in impairment of the account within the next 12 months; • Accounts past due more than 30 days or 1 month but less than 90 days or 3 months; • Account demonstrating critical level of risk and therefore, credit graded to 14 and place under Watchlist or; • Restructuring and rescheduling ("R&R") with significant increase in credit risk. 	Lifetime ECL - not credit impaired
Impaired accounts (Stage 3)	<ul style="list-style-type: none"> • Impaired credit; • Credit grade 15 or worse; • Accounts past due more than 90 days or 3 months; or. • R&R which has resulted in a reclassification to Stage 3. 	Lifetime ECL - credit impaired

The Bank has not used the low credit risk exemption for any financial instrument for the financial year ended 31 December 2022.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Measurement of ECL (continued)

The key inputs into the measurement of ECL comprise the following variables:

- probability of default ("PD");
- loss given default ("LGD"); and
- exposure at default ("EAD").

These parameters are generally derived from internally developed statistical models and other historical data. They are adjusted to reflect forward-looking information as described above.

PD is the likelihood of a counterparty defaulting on its contractual obligations to a financial institution over a given time horizon and are estimates at a certain date, which are calculated based on statistical models. These statistical models are based on internally compiled data comprising both quantitative and qualitative factors. If a counterparty or exposure migrates between rating classes or changes in past due status, then this will lead to a change in the estimate of the associated PD. PDs are estimated considering the contractual maturities of exposures and estimated prepayment rates.

Credit risk grades and past due status are a primary input into the determination of the term structure of PD for exposures. The Bank's holding company collects performance and default information about its credit risk exposures analysed by type of product and borrower as well as by credit risk grading. For some portfolios, information from external credit reference agencies are also used.

The Bank leverages on its holding company's statistical models to analyse the data collected and generate estimates of the remaining lifetime PD of exposures and how these are expected to change as a result of the passage of time.

The lifetime PD is developed by applying a maturity profile to the current 12-month PD. The maturity profile looks at how defaults develop on a portfolio from the point of initial recognition throughout the lifetime of the loans. The maturity profile is based on historical observed data and is assumed to be the same across all assets within a portfolio and credit grade band. This is supported by historical analysis.

LGD is the magnitude of the likely loss if there is a default. LGD parameters are estimated based on the history of recovery rates of claims against defaulted counterparties. The LGD models consider the structure, collateral, seniority of the claim, counterparty industry and recovery costs of any collateral that is integral to the financial asset. LGD estimates are recalibrated for different economic scenarios. They are calculated on a discounted cash flow basis using the effective interest rate as the discounting factor.

EAD represents the expected exposure in the event of a default. The Bank derives the EAD from the current exposure to the counterparty and potential changes to the current amount allowed under the contract including amortisation. The EAD of a financial asset is its gross carrying amount. For lending commitments and financial guarantees, the EAD includes the amount drawn, as well as potential future amounts that may be drawn under the contract, which are estimated based on historical observations and forward-looking forecasts. For some financial assets, EAD is determined by modelling the range of possible exposure outcomes at various points in time using scenario and statistical techniques.

The 12-month and lifetime EADs are determined based on the expected payment profile, which varies by product type.

ECL is determined by projecting the PD, LGD and EAD at each future point on a yearly basis on individual exposure, or collective segment, and discounting these monthly expected losses back to the reporting date. The discount rate used in the ECL calculation is the original interest rate or an approximation thereof.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Measurement of ECL (continued)

As described above, and subject to using a maximum of a 12-month PD for financial assets for which credit risk has not significantly increased, the Bank measures ECL considering the risk of default over the maximum contractual period (including any borrower's extension options) over which it is exposed to credit risk, even if, for risk management purposes, the Bank considers a longer period. The maximum contractual period extends to the date at which the Bank has the right to require repayment of an advance or terminate a loan commitment or guarantee.

Forward looking economic information is also included in determining the 12 month and lifetime PD, LGD and EAD.

Where modelling of a parameter is carried out on a collective basis, the financial instruments are grouped on the basis of shared risk characteristics that include:

- product/instrument type;
- past due status;
- credit risk gradings;
- collateral type;
- date of initial recognition; and
- remaining term to maturity.

The groupings are subject to regular review to ensure that exposures within a particular group remain appropriately homogeneous.

There have been no significant changes in estimation technique or significant assumptions made during the reporting period that have material impact to the ECL.

Incorporation of forward-looking information

The Bank incorporates forward-looking information into both its assessment of whether the credit risk of an instrument has increased significantly since its initial recognition and its measurement of ECL. A "base case" view of the future direction of relevant economic variables as well as a representative range of other possible forecast scenarios are formulated.

This process involves developing two or more additional economic scenarios and considering the relative probabilities of each outcome. External information includes economic data and forecasts published by governmental bodies and monetary authorities.

The base case represents a most-likely outcome and is aligned with information used by the Bank for other purposes such as strategic planning and budgeting. The other scenarios represent more optimistic and more pessimistic outcomes. Periodically, the Bank carries out stress testing of more extreme shocks to calibrate its determination of these other representative scenarios.

The Bank has identified and documented key drivers of credit risk and credit losses for each portfolio of financial instruments and, using an analysis of historical data, has estimated relationships between macro-economic variables and credit risk and credit losses.

Predicted relationships between the key indicators and default and loss rates on various portfolios of financial assets have been developed based on analysing historical data over the past 3 years.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Credit risk monitoring

Corporate credits and large individual accounts are subject to ongoing monitoring. This is to ensure that the credit grades remain appropriate and to detect any signs of weaknesses or deterioration in the credit quality. Appropriate remedial action is taken where evidence of deterioration exists.

The credit monitoring process is also to identify significant increase in credit risk as a means to pro-actively identify, report and manage deteriorating credit quality. Watchlist accounts are closely reviewed and monitored with corrective measures initiated to prevent them from turning non-performing. Watchlist accounts are either managed up or managed out within a period of twelve months.

The Bank has established 'MFRS 9 - Stage Transfer Policy' to provide guidance in determining significant increases in credit risk of financial assets. There are 3 stages to differentiate the credit risk of financial assets in conjunction with MFRS 9 standards: Performing Accounts (Stage 1), Underperforming Accounts (Stage 2) and Impaired Accounts (Stage 3).

Active portfolio monitoring as well as exceptions reporting is in place to manage the overall risk profile, identify, analyze and mitigate adverse trends or specific areas of risk concerns. The Affin Banking Group's Early Alert Committee ("GEAC") is a senior management committee, established to monitor credit quality through monthly reviews of the Early Control (Stage 1) and Underperforming (Stage 2) accounts as well as to review the actions taken to address the emerging risks and issues in these accounts.

The Bank conducts post-mortem reviews on newly impaired loans to determine the key reason(s) and/or driver(s) leading to the account being classified as impaired, take appropriate remedial actions or measures and establish lessons learned to minimize potential or future credit loss from similar or repeat events.

In addition, an independent credit review is undertaken by RMD to ensure that credit decision-making is consistent with the Bank's overall credit risk appetite and strategy.

PILLAR 3 DISCLOSURES

4.2 Past Due And Impaired Loans, Advances And Financing

The Group and the Bank define a financial instrument as default, which is fully aligned with the definition of credit-impaired, when it meets one or more of the mandatory and/or judgmental indicators, which include amongst others, the following criteria:

(i) Mandatory indicators

- Failure to make contractual payment within 90 days or 3 months or when they fall due;
- Rescheduling and/or Restructuring ("R&R") due to Impairment Symptoms or Corporate Debt Restructuring Committee ("CDRC");
- Internal rating deteriorated to Credit Grade 15 or worse;
- Rating downgrade to default grade "D";
- Distressed restructuring or rescheduling of coupon and/or principal redemption resulting in an extended grace period to service coupon or even capitalise coupon;
- Primary repayment source is terminated indefinitely, or business model is deemed no longer viable, and no other alternative source of repayment is available;
- Cessation of business operations and business operation is unlikely able to resume;
- Borrower/customer is adjudicated bankrupt;
- Winding-up order issued against the company;
- Receiver and manager appointed;
- Corporate Rescue Mechanism, implementation of Corporate Voluntary Arrangement ("CVA") or Order for Judicial Management ("JM") granted by Court;
- Classification by Bursa Malaysia as distressed company due to credit deterioration e.g. PN17, GN3 and failing to comply with the timeline for remedial action, and/or evidence of business failure; and
- Account classified as fraud.

(ii) Judgemental indicators

- Other debts including Treasury Instruments default and/or transferred to Stage 3 (Cross Default).

The Group and the Bank first assess whether objective evidence of impairment exists for financial assets which are individually significant. If the Group and the Bank determine that objective evidence of impairment exists, i.e. credit impaired, for an individually assessed financial asset, a lifetime ECL will be recognised.

Financial assets which are individually significant but non-impaired and not individually significant are grouped on the basis of similar credit risk characteristics (such as credit quality, instrument type, credit risk ratings, credit utilisation, customer types and other relevant factors) for collective assessment.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Write-off policy

The Group and the Bank write-off financial assets, in whole or in part, when it has exhausted all practical recovery efforts and has concluded there is no reasonable expectation of recovery.

Indicators that there is no reasonable expectation of recovery include:

- (i) ceasing enforcement activity; and
- (ii) where the Groups recovery method is foreclosing on collateral and the value of the collateral is such that there is no reasonable expectation of recovering in full.

Modification of loans/financing

The Group and the Bank sometime renegotiates or otherwise modifies the contractual cash flows of loans to customers. When this happens, the Group and the Bank assess whether or not the new terms are substantially different to the original terms. The Group and the Bank do this by considering, among others, the following factors:

- If the borrower is in financial difficulty, whether the modification merely reduces the contractual cash flows to amounts the borrower is expected to be able to pay.
- Whether any substantial new terms are introduced, such as a profit share/equity-based return that substantially affects the risk profile of the loan.
- Significant extension of the loan term when the borrower is not in financial difficulty.
- Significant change in the interest rate.
- Change in the currency the loan/financing is denominated in.
- Insertion of collateral, other security or credit enhancements that significantly affect the credit risk associated with the loan/financing.

If the terms are substantially different, the Group and the Bank derecognise the original financial asset and recognises a "new" asset at fair value and recalculates a new effective interest rate for the asset. The date of renegotiation is consequently considered to be the date of initial recognition for impairment calculation purposes, including for the purpose of determining whether a significant increase in credit risk has occurred. However, the Group and the Bank also assess whether the new financial asset recognised is deemed to be credit-impaired at initial recognition, especially in circumstances where the renegotiation was driven by the debtor being unable to make the originally agreed payments. Differences in the carrying amount are also recognised in profit or loss as a gain or loss on derecognition.

If the terms are not substantially different, the renegotiation or modification does not result in derecognition, and the Group and the Bank recalculate the gross carrying amount based on the revised cash flows of the financial asset and recognises a modification gain or loss in profit or loss. The new gross carrying amount is recalculated by discounting the modified cash flows at the original effective interest rate (or credit-adjusted effective interest rate for purchased or originated credit-impaired financial assets).

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Derecognition other than on a modification

Financial assets, or a portion thereof, are derecognised when the contractual rights to receive the cash flows from the assets have expired, or when they have been transferred and either (i) the Group and the Bank transfer substantially all the risks and rewards of ownership, or (ii) the Group and the Bank neither transfer nor retain substantially all the risks and rewards of ownership and the Group and the Bank have not retained control.

The Group and the Bank enter into transactions where it retains the contractual rights to receive cash flows from assets but assumes a contractual obligation to pay those cash flows to other entities and transfers substantially all of the risks and rewards. These transactions are accounted for as "pass through" transfers that result in derecognition if the Group and the Bank:

- i) have no obligation to make payments unless it collects equivalent amounts from the assets;
- ii) are prohibited from selling or pledging the assets; and
- iii) have obligation to remit any cash it collects from the assets without material delay.

Collateral (shares and bonds) furnished by the Group and the Bank under standard repurchase agreements and securities lending and borrowing transactions are not derecognised because the Group and the Bank retain substantially all the risks and rewards on the basis of the predetermined repurchase price, and the criteria for derecognition are therefore not met. This also applies to certain securitisation transactions in which the Group and the Bank retain a subordinated residual interest/profit.

Regulatory reserve requirements

Pursuant to BNM Financial Reporting policy dated 29 April 2022, the Group and the Bank shall maintain, in aggregate, loss allowance for non-credit-impaired exposures and regulatory reserves of no less than 1% of all credit exposures, net of loss allowance for credit-impaired exposures.

PILLAR 3 DISCLOSURES

4.3 Credit Risk Assessment Under Standardised Approach

In the assessment of credit risk under the Standardised Approach, the Bank is guided by BNM's pre-determined risk weights for certain classes of exposure that uses external ratings issued by an ECAI recognised by BNM.

The ECAIs recognised by BNM are as follows:

- Standard & Poor's Rating Services ("S&P")
- Moody's Investors Service ("Moody's")
- Fitch Ratings ("Fitch")
- Rating and Investment Information, Inc. (R&I)
- RAM Rating Services Berhad ("RAM")
- Malaysian Rating Corporation Berhad ("MARC")

The ratings of the above ECAIs are used in the credit risk assessment for the following classes of exposure:

- Sovereigns and Central Banks
- Banking Institutions
- Corporates
- Insurance Companies, Securities Firms and Fund Managers

If more than one rating is available for a specific exposure, the selection criteria as set out under the Single and Multiple Assessment in BNM RWCAF is applied in determining the relevant risk weight for the capital calculation. An exposure cannot be assigned with a risk weight that is lower than that of the sovereign risk of the country in which the asset is located. Where a rating is not available, the Bank follows the provisions stipulated under BNM RWCAF and deems the exposure as unrated.

PILLAR 3 DISCLOSURES

4.4 Credit Risk Mitigation Techniques Under Standardised Approach

The Bank uses a variety of techniques to mitigate credit risk, one of which is to evaluate and assess the creditworthiness and ability of a customer to service the debt facility without distress.

The Bank commonly obtains securities as collateral for loan and stockbroking trading portfolio. The Bank ensures that the collateral held is sufficiently liquid, legally effective, enforceable and regularly valued.

The Bank proactively manages its credit exposures and when weaknesses in exposures are detected either in individual exposures or in groups of exposures, prompt action is taken to mitigate the risks. This includes steps to manage the exposure through discussion with the customers, borrowers, dealers' representatives or other relevant counterparties.

The Bank also uses legal agreements to reduce credit risk, including netting agreements which permits it to offset positive and negative balances with the same counterparties to minimise the exposure, financial guarantees and use of covenants in loan agreements.

Credit risk mitigation to address risk concentration takes several dimension, in which limits are set and monitored for individual and group counterparty level:

- Limits are set against all types of exposure to a counterparty name, in accordance with an agreed methodology for each exposure type, i.e. on and off-balance sheet exposures. This includes credit risk exposure on individual derivative transactions, which incorporates potential future exposures from market movements.
- Aggregate facility levels by counterparty are set and monitored in accordance to regulatory requirement. Any limit breaches are subject to escalation procedures.
- Credit risk management includes control and review on sector exposures (for corporate loans and debt securities) to reflect the Bank's risk appetite and managing exposures to high risk and more vulnerable sectors and unfavourable rated debt securities. Exposures are monitored to prevent excessive concentration of risk.
- The Bank has limited exposure to external country risks as most of its exposures are concentrated in Malaysia.

Collateral

The Bank maintains guidelines on the acceptability of specific classes of collateral. The principal collateral types for loans and stockbroking trading accounts are:

- cash or deposits;
- debt securities and equities; and
- land or properties.

To mitigate credit risk while dealing in derivative products, the Bank makes use of margining arrangements under International Swap and Derivative Association ("ISDA") agreements, in which both counterparties are required to post collateral in the form of cash or liquid securities permitted under the agreements with applicable haircut as appropriate to cover outstanding trading positions if margining thresholds stated under Credit Support Annex ("CSA") of the ISDA Agreement are breached.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

4.4 Credit Risk Mitigation Techniques Under Standardised Approach (Continued)

It is the Bank's policy that collateral should be valued by an independent qualified source at inception. Collateral is reviewed on a regular basis in accordance with the credit policies applicable for Affin Bank Group, which will vary according to the type of exposures and collateral involved.

Tracking and controls over receipt and withdrawal of collaterals are maintained by a department independent from the business unit. For the collaterals in the form of securities, these are safeguarded by the custodian appointed by the Bank.

In order to minimise the credit loss, the Bank may seek additional collateral from the counterparty as soon as impairment indicators are identified for the relevant individual loans or when dealers' representatives have deficit cash collateral due to the deduction of cash collaterals against clients' overdue contra losses and interests under stockbroking trading accounts.

Guarantees

A guarantee is a legally binding contractual commitment made to the Bank that ensures that the guarantor is legally responsible to meet the obligations of a borrower in the event the borrower fails to pay.

PILLAR 3 DISCLOSURES

4.5 Off-Balance Sheet Exposure and Counterparty Credit Risk

Counterparty Credit Risk is the risk that the counterparty to a transaction could default before the final settlement of the transaction's cash flows. Transactions refer to contracts for financial instruments including derivative contracts and unsettled securities.

Credit risk arising from derivative transaction can be mitigated in several ways, including the use of:

- Collateral, which may be liquidated and satisfy the counterparty's obligations to the Bank upon closeout.
- Netting, which gives the Bank the right to close out and net all transactions under market standard master netting agreements such as the ISDA Master Agreement and CSA;

The above risk mitigation techniques are employed where possible and are explained as below:

Collateral

The Bank will negotiate for CSA under ISDA Master Agreement with selected counterparties on a case-by-case basis, where collateral is deemed necessary mitigator to the risk exposure. The terms of the CSA specified in each legal document are required to be approved by Legal Department. The nature of the collateral will be specified in the legal document and can be cash or selected government securities. Any non-cash collateral taken will be subject to a 'haircut' which is negotiated at time of signing of the collateral agreement and this will be largely based on liquidity and price volatility of the underlying collateral security.

A daily operational process takes place to calculate the mark-to-market on all trades and collateral captured under the CSA. Additional collateral will be called from the counterparty if total uncollateralised marked-to-market exposure exceeds the threshold and minimum transfer amount specified in the CSA. Additional collateral may be required from the counterparty to provide an extra buffer to the daily variation margin process.

Bilateral Netting Agreement

The Bank further reduces its credit exposures to counterparty by entering into contractual netting agreement which creates a single legal obligation, covering all transactions that the Bank could have either a claim to receive or obligation to pay only the net sum of the positive (amounts owed by the counterparty) and negative (amounts owed by the Bank) mark-to-market values of all transactions including individuals in the event a counterparty fails to perform due to default, bankruptcy, liquidation or similar circumstances.

ISDA Master Agreement is the Bank's preferred agreement as it encompasses the largest number of products and thus provides the greatest cross-product netting benefits.

Credit Equivalent Limits

All credit exposures are approved either by approval of an individual facility (e.g. loan) or under a system of credit limits (e.g. derivatives, securities, stockbroking trading exposures). Credit exposure is monitored daily to ensure it does not exceed the approved credit limit. These credit limits are set either on notional exposure or pre-settlement credit exposure basis (e.g. for derivatives). Credit Equivalent Limit is an estimate of the potential exposure in the event that the counterparty default prior to settlement of the contract.

Collateral Requirement in the Event Of a Downgrade in Credit Ratings

A significant increase in the level of collateral would be required in the event of a credit ratings downgrade of the counterparties as allowable in the collateral agreements.

5 SECURITISATION

The Group and the Bank currently do not have any securitisation activities.

6 MARKET RISK

Market risk is the risk of losses to the Bank's positions in financial instruments that are adversely affected by movements in market risk factors such as interest rates, foreign exchange rates, equity prices or commodity prices. The Bank's primary market risk exposures are in the trading and investment portfolios. The Bank's risk management process involves the identification and measurement, mitigation and control, monitoring and testing as well as reporting and review of risk.

Risk Governance

The Bank manages market risk through a comprehensive set of market risk controls. Key risk governance committees such as the ALCO and the BRMC establish and monitor controls with oversight by the Board of Directors. Market risk controls are established to ensure that the Bank's market risk profile remains within the boundaries of the Bank's risk appetite.

Policies and Approaches

The market risk policy of the Bank establishes the base standards on management of market and liquidity risks within the Bank. Together with the Bank's other existing policies, detailed guidelines/ methodologies in managing market and liquidity risks are laid down to cover the following areas:

- Market risk management principles;
- Market risk measurement methodologies;
- Trading and banking book classification;
- Valuation methodology;
- Market risk limit structure and management;
- Stress testing approach; and
- Internal controls and standards on validation of valuation models and market risk models.

The principal measurement methodology used by the Bank to measure and control market risk exposures arising from the trading book portfolio is Value-at-Risk ("VaR"). VaR is a statistical measure of potential portfolio market value loss resulting from changes in market variables such as foreign exchange rates and interest rates, over a given holding period, measured at a specific confidence level. The Bank uses a variance-covariance method based on a 1-day holding period and a 99% confidence interval as its market risk VaR methodology. The VaR model is back-tested regularly to validate its robustness.

In addition, the Bank also uses other market risk controls, such as stop loss control, which sets a threshold on the net cumulative loss of the trading book over a defined period of time; and present value basis point, an interest rate sensitivity tool.

Stress testing complements the VaR framework in measuring market risks. Specifically, stress tests are conducted to attempt to quantify potential market risk losses arising from low probability abnormal market movements. Stress tests measure the changes in values arising from movements in relevant market risk factors based on past experience and simulated stress scenarios. For more detailed information, please see Stress Testing as discussed in Section 3 of this report.

Affin Hwang Investment Bank Berhad

PILLAR 3 DISCLOSURES

Risk Reporting and Monitoring

RMD is responsible in the monitoring and tracking of market risk limits based on the frequencies as set out in the Bank's relevant risk policies. Any limit excesses are reported in accordance with the exception escalation procedures, which may be followed by the appropriate remedial processes, if necessary.

The Bank also sets trigger limits in alerting any potential limit breaches and unusual movements of certain indicators to prompt early investigative action and escalation process. This is part of the daily trading disciplines on the trading book activities. Review of the market risk limits is conducted annually.

Market risk reports are submitted on periodical basis to ALCO and BRMC in order to facilitate their effective oversight of market risk management activities through evaluation of the nature, level and trend of market risk undertaken by the Bank.

Regulatory Capital Treatment

The Bank is adopting the Standardised Approach in calculating market risk RWA. Market risk is measured for interest rate and equity risks pertaining to financial instruments in the trading book and foreign exchange risk in both the trading and banking books, as well as options risk arising from underwriting activities; as defined under BNM RWCAF for regulatory capital computation purpose.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

7 OPERATIONAL RISK

Operational risk is the risk of loss arising from inadequate or failed internal processes, action on or by people, systems or external events which include natural disasters, fraudulent activities and cyber threats. Management of operational risk also encompasses outsourcing and business continuity risks.

The Bank manages operational risk through a control based environment in which policies and procedures are formulated after taking into account individual unit's business activities, the market in which they are operating and the regulatory requirements in force.

Risk Governance

The Operational Risk Management Unit ("ORMU") plays a centralised function for operational risk management oversight within the Risk Management Department ("RMD") and it is independent of any other functions within the Bank.

RMD facilitates risk assessment and monitoring mainly through the Risk Control Self Assessment ("RCSA") process to enable Business Units to identify and assess key risks under their areas of supervision and control on a continual basis. This serves as a trigger point to determine Key Risk Indicators ("KRIs") for operational risk monitoring purposes.

Policies and Approaches

Affin Hwang Investment Bank Berhad adopts the Group Operational Risk Management Policy which governs the management of operational risk including methodology used to ensure that operational risks within the Bank are identified, monitored and managed in a systematic and consistent manner.

Risk Measurement

Operational Risk Measurement Tools

Risk is identified through the use of assessment tools and measured using threshold/limits mapped against risk matrix. Monitoring and control procedures include the use of key control standards, independent tracking of risk, back-up procedures and contingency plans, including disaster recovery and business continuity plans.

Risk Reporting and Monitoring

Exception reports are produced on a regular basis, highlighting material operational risk related issues to CROC, BRMC as well as the Group Management Meeting - Governance, Risk and Compliance ("MCM-GRC") for risk monitoring and appropriate level of management decision making.

The Bank gathers, analyses and reports operational risk loss and 'near miss' events to the CROC and BRMC. Appropriate preventive and remedial actions are reviewed for effectiveness and implemented to minimise the recurrence of such events.

Concerns and breaches, if any, will be escalated to the Chief Risk Officer, CROC, MCM-GRC, BRMC and the Board. The same will be escalated to the Board committee(s) at the Group level.

Relevant training relating to Operational Risk areas (including Business Continuity Planning) are coordinated by RMD. This include training and online assessments provided to all Operational Risk Coordinators within the Bank as part of the risk awareness program.

Regulatory Capital Treatment

The Bank adopts the Basic Indicator Approach in calculating the operational risk RWA as at 31 December 2022.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

8 TECHNOLOGY RISK

Technology risk is the risk of potential technology failures and cyber threats that may disrupt business such as failures of information technology systems, applications, platforms or infrastructures including threats or vulnerabilities exposed from external networks or the internet, which would result in financial loss, disruption in financial services or operations, or reputational damage to the Bank.

Risk Governance

The Group Technology Risk Management Framework ("TRMF") governs the management of technology risk across the Bank. Overview of the Technology Risk Management function resides with RMD. RMD supports CROC which in turn supports BRMC in the review and monitoring of technology risks and provides the forum to discuss and manage all aspects of technology risk. BRMC is responsible to provide oversight of overall technology related matters of the Bank.

The Bank uses risk identification and assessment to determine the extent of the potential threat and the risk associated with an IT systems. The output of this process helps to identify appropriate controls for reducing risk during the risk mitigation process.

Concerns and breaches, if any, will be escalated to the Chief Risk Officer, CROC, BRMC and the Board. The same will be escalated to the Board committee(s) at the Group level.

Policies and Approaches

The Bank adopts Group TRMF and Cyber Resilience Framework ("CRF") which govern the technology risk management framework and methodology used to ensure that technology risks within the Bank are identified, monitored and managed in a systematic and consistent manner.

Risk Controls

Technology risk controls encompass the use of technical and non-technical methods. Technical controls are safeguards that are incorporated into computer hardware, software or firmware (e.g. access control mechanisms, identification and authentication mechanisms, encryption methods, intrusion detection software). Non-technical controls are management and operational controls, such as security policies, operational procedures and personnel, physical and environmental security.

Risk Reporting and Monitoring

Technology Risk Management Unit ("TRMU") is responsible for the monitoring and tracking of technology risk limits based on the KRIs as set out by the Bank's relevant risk policies. Any limit excesses are reported in accordance with the exception escalation procedures, which may be followed by the appropriate remedial processes, if necessary.

TRMU reports pertinent technology risk related matters (eg. Critical systems availability / Cyber Threats Posture / KRIs) to CROC, BRMC and Board. Appropriate preventive and remedial actions are reviewed for effectiveness and implemented to minimise the recurrence of such events.

PILLAR 3 DISCLOSURES

9 EQUITIES IN THE BANKING BOOK

The Bank's banking book equity investment consists of:

- Investments held for yield and/or long term capital gains; and
- Strategic stakes in entities held as part of growth initiatives and/or in support of business operations.

Investment in equity or Collective Investment Scheme ("CIS") investments are subject to limits which are set based on the Bank's total capital and/or notional limits.

Accounting for Equity or CIS Holdings in the Banking Book

Different equity investment positions have different accounting treatments depending on the nature of the exposures. Where the equity investment is not subject to the significant influence or joint control of the Bank, it is held as a direct investment, which is classified as either fair value through other comprehensive income ("FVOCI") or fair value through profit or loss ("FVTPL") in accordance to MFRS 9.

FVOCI and FVTPL securities are initially stated at fair value except for investments in equity/CIS that do not have a quoted market price in an active market and whose fair value cannot be reliably measured, will be stated at cost. Consistent with the valuation of financial instruments, fair value of equity securities is initially and subsequently determined using, where available, quoted prices in active markets or valuation techniques where quoted prices in active markets are not available.

The Group and the Bank subsequently measure all equity investments at fair value. Where the Group's and the Bank's management have elected to present fair value gains and losses on equity investments in FVOCI, there is no subsequent reclassification of fair value gains and losses to profit or loss following the derecognition of the investment. Dividends from such investments continue to be recognised in profit or loss as other income when the Group's and the Bank's right to receive payments is established.

Changes in the fair value of equity investments at FVTPL are recognised in "net gains and losses on financial instruments" in the income statement.

PILLAR 3 DISCLOSURES

10 INTEREST RATE RISK IN THE BANKING BOOK

The Bank is exposed to interest rate risk in banking book ("IRRBB") arising from differences in the repricing mismatch between rate sensitive assets and liabilities. The Bank measures and monitors the IRRBB exposures through the short-term Net Interest Income ("NII") sensitivity and changes in the Economic Value of Equity ("EVE").

Policies and Approaches

The management of IRRBB is governed under the Asset Liability Management Policy.

The objective of the management of IRRBB is to maintain an acceptable mismatch in interest-sensitive assets, liabilities and derivative financial instruments in the banking book, while achieving a desired level of earnings.

Risk Measurement

In managing IRRBB, both the earnings and economic value approaches are adopted. Interest-sensitive assets, liabilities and derivative financial instruments are grouped into time buckets based on the earlier of remaining period to maturity or next re-pricing; before a parallel interest rate shock is applied to arrive at the sensitivity shocks on earnings and economic value.

The earnings approach focuses on the impact of interest rate movement on the Bank's near term earnings. The economic value approach provides a more comprehensive view of the impact of interest rate movements on the economic value of the Bank's overall positions.

Risk Reporting and Monitoring

The impact of interest rate movements quantified using the economic value approach is subject to approved limit and monitored on daily basis. Review of the risk limit is conducted annually.

Impact on earnings and economic value are periodically reported to ALCO and BRMC to facilitate their effective oversight of interest rate risk in banking book. Any non-compliance is subject to a set of escalation procedures.

PILLAR 3 DISCLOSURES

The following table depicts the sensitivity shocks on earnings and economic value of the Bank's positions in banking book, to a parallel interest rate shock of +/- 100 basis points ("bps"):

Table 19: Sensitivity of the banking book to interest rate changes

	The Group		The Bank	
	Increase / (Decrease) in RM'000		Increase / (Decrease) in RM'000	
As at 31 December 2022	+100 bps	-100 bps	+100 bps	-100 bps
Impact on Earnings *				
MYR	(30,183)	30,183	(30,183)	30,183
USD	(478)	478	(478)	478
SGD	(38)	38	(38)	38
Others	(88)	88	(88)	88
Total	(30,787)	30,787	(30,787)	30,787
Impact on Economic Value #				
MYR	(173,918)	173,918	(173,918)	173,918
USD	(20)	20	(20)	20
SGD	2	(2)	2	(2)
Others	(14)	14	(14)	14
Total	(173,949)	173,949	(173,949)	173,949

	The Group		The Bank	
	Increase / (Decrease) in RM'000		Increase / (Decrease) in RM'000	
As at 31 December 2021	+100 bps	-100 bps	+100 bps	-100 bps
Impact on Earnings *				
MYR	(16,297)	16,297	(16,297)	16,297
USD	(829)	829	(829)	829
SGD	24	(24)	24	(24)
Others	-	-	-	-
Total	(17,103)	17,103	(17,103)	17,103
Impact on Economic Value #				
MYR	(147,831)	147,831	(147,831)	147,831
USD	(11)	11	(11)	11
SGD	(201)	201	(201)	201
Others	-	-	-	-
Total	(148,042)	148,042	(148,042)	148,042

* The earnings approach focuses on the impact of interest rate movement on the Bank's near term earnings (within 1 year).

The economic value approach provides a more comprehensive view of the impact of interest rate movement on the economic value of the Bank's overall positions.
