PILLAR 3 DISCLOSURES

OVERVIEW

Bank Negara Malaysia (“BNM”)’s Risk-Weighted Capital Adequacy Framework (“RWCAF”) (Basel II) – Disclosure Requirements (Pillar 3) aims to improve the transparency of financial institution activities and risks, which is a key element of an effectively supervised financial system.

Pillar 3 Disclosures is governed by BNM RWCAF - Pillar 3 and Capital Adequacy Framework (Capital Components) issued by BNM, which spells out the guidelines in determining the contents (including materiality, appropriateness and confidentiality), frequency, medium, location of public disclosures, as well as internal controls over the disclosure verification process.

The following disclosure information is based on 31 December 2019 financial year end data and has been independently reviewed by the Internal Audit Department. However, where the disclosure is reliant upon the disclosure in the Bank’s audited financial statements, the disclosure in the audited financial statements has been subjected to the formal review and verification process by the external auditor.

The Pillar 3 Disclosures is published on the Bank’s corporate website at <http://www.affinhwang.com>.

PILLAR 3 DISCLOSURES

1 SCOPE OF APPLICATION

The Pillar 3 Disclosures attached herewith relates to the Bank and its subsidiaries ("the Group"). This Pillar 3 Disclosures is published for the financial year ended 31 December 2019, with comparative information for both the Bank and the Group for the financial year ended 31 December 2018.

For financial reporting purposes, the basis for consolidation of the Group financial statements is in accordance to the Malaysian Financial Reporting Standards.

The basis for accounting consolidation is as disclosed in Note B 'Summary of significant accounting policies for the financial year ended 31 December 2019' of the financial statements of the Bank. Further information on the Bank's consolidated entities can be referenced to Note 12 of the Bank's financial statements.

The principal activities of the Bank are in investment banking, stockbroking activities, dealing in options and futures and related financial services.

The principal activities of the subsidiaries are asset management, management of unit trust funds and private retirement schemes, Islamic fund management, trustee services and nominee services.

During the financial year, the Group did not encounter any restriction or impediment in the distribution of dividends, transfer of funds or regulatory capital.

2 CAPITAL MANAGEMENT

The Group and the Bank's objectives when managing capital are to comply with:

- i) The minimum capital requirement of 10.50% (2018: 9.875%) under BNM RWCAF;
- ii) The Board-approved Internal Capital Adequacy Assessment Process ("ICAAP"), which amongst others:
 - To safeguard the Bank's ability to continue as a going concern so that it can continue to provide returns to the shareholders and benefits for other stakeholders; and
 - To maintain a strong capital base to support the development of its business.

PILLAR 3 DISCLOSURES

2.1 Capital Adequacy Ratios

The capital adequacy ratios of the Group consist of total capital and risk-weighted assets derived from the consolidated financials of the Bank and the Group.

The Group and the Bank have adopted the following approaches to assess its regulatory capital requirements under BNM RWCAF Pillar 1:

- Credit risk (Standardised Approach)
- Market risk (Standardised Approach)
- Operational risk (Basic Indicator Approach)

With effect from 1 January 2018, the total capital and capital adequacy ratios of the Group and the Bank are computed in accordance with BNM's revised Capital Adequacy Framework (Capital Components) dated 2 February 2018.

The Group and the Bank are currently adopting Standardised Approach for Credit Risk and Market Risk and the Basic Indicator Approach for Operational Risk. In line with the transitional arrangements under the BNM's Capital Adequacy Framework (Capital Components), the minimum capital adequacy requirement for Common Equity Tier 1 Capital Ratio ('CET 1') and Tier 1 Capital Ratio are 7.00% (2018: 6.375%) and 8.50% (2018: 7.875%) respectively for financial year ended 31 December 2019. The minimum regulatory capital adequacy requirement for total capital ratio is at 10.50% (2018: 9.875%).

PILLAR 3 DISCLOSURES

2.2 Capital Structure

For regulatory purposes, capital is categorised into Common Equity Tier 1 ("CET 1") Capital, Additional Tier 1 Capital and Tier 2 Capital which are described below:

CET 1 Capital

CET 1 Capital /Tier I Capital (Basel III) comprises ordinary paid-up share capital, share premium, statutory reserve, audited retained profits, other disclosed reserves, unrealised gains on FVOCI instruments and net of regulatory adjustments namely goodwill, intangible assets, 55% of cumulative gains on FVOCI instruments, deferred tax assets, investment in subsidiaries and investment in associates.

Share capital is the issued and fully paid share capital and there is no obligation to pay a coupon or dividend to the shareholders. Retained profits and statutory reserve are accumulated resources included in Total Equity in the Statement of Financial Position.

Additional Tier 1 Capital

Additional Tier 1 capital comprises of qualifying non-controlling interest.

Tier 2 Capital

Tier 2 capital comprises of expected credit loss for financial assets, subject to a maximum of 1.25% of total credit risk RWA.

PILLAR 3 DISCLOSURES

3 RISK MANAGEMENT

As a full-fledged investment bank, the Bank has established robust and comprehensive risk management policies and framework, based on best practices, to ensure that the salient risk elements in the operations of the Bank are adequately managed and mitigated. The Bank's framework for the management of financial risks is congruent with the primary corporate objective of creating and enhancing shareholders' value, guided by a prudent and robust framework of risk management methodologies and policies.

The Bank's risk management policies and framework are reviewed periodically to ensure that they are comprehensive in addressing the multi-faceted risks associated with the investment banking sector.

The Risk Management Department ("RMD") is primarily responsible for the development and maintenance of the risk management policies and framework of the Bank and supports the functions of the Asset and Liability Committee ("ALCO"), Compliance and Risk Oversight Committee ("CROC"), Board Risk Management Committee ("BRMC") as well as Group committees of the Affin Bank Group.

Risk Governance

Appropriate risk governance structure is cascaded throughout all levels of the Bank which comprise of Board of Directors ("Board"), relevant committees, business units and support units.

The Board is ultimately responsible for assuming the risks inherent in the Bank's business activities and defining the policies for governing those activities. BRMC is responsible to support the Board in the oversight of the Bank's risk management framework and policies.

BRMC is authorised by the Board in overseeing all risk-taking activities in the Bank. Its key responsibilities involve reviewing and recommending risk management strategies, risk tolerance, new products, capital allocation process; and assessing the adequacy of risk management policies, framework, infrastructure and resources for implementation of risk strategies. For monitoring purpose, BRMC reviews periodic reports on risk exposures, risk portfolio composition and risk management activities. These reports, prepared by RMD cover credit, market, liquidity and operational risks.

At management level, CROC and ALCO assist the BRMC and the Board in their supervisory roles in the management of credit, market, liquidity, and operational risks as well as assets and liabilities management of the Bank. These two committees provide an executive forum for discussions and decisions on all aspects of credit, market, liquidity and operational risks, as well as assets and liabilities management matters.

Under the Credit Authority Framework approved by the Board, Group Management Credit Committee ("GMCC") and Board Credit Review Committee ("BCRC") are authorised to review and approve, reject or modify proposals for credit and underwriting applications. Impaired credits are independently managed by Credit Resolution Committee ("CRC").

Internal Audit provides reasonable assurance on the adequacy and effectiveness of internal control systems of the business and support units, examines adherence to policies and procedures and assesses compliance with external laws and regulations.

RMD acts as an independent and neutral party in providing comprehensive and independent views of Bank-wide risks.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Risk Measurement

The risk measurement tools employed by the Bank are commonly used in market practices and commensurate with the size and complexity of the Bank's business operations.

Stress Testing

The Bank has deployed stress testing in assessing the impact of stressed market conditions on its capital, profit, liquidity and asset quality in accordance with the Group Stress Test Framework and Methodology.

Stress testing results are periodically reported to ALCO and BRMC to enable them to consider the implications on the Bank's overall business strategy, capital management, risk profile and to consider appropriate corrective measures when necessary. The stress testing is also performed periodically to meet both internal and regulatory external reporting requirements.

Internal Audit acts as an independent party in performing an annual review of the Bank's stress testing policy, procedures and processes including the stress scenarios used to ensure the quality and effectiveness of the programme.

The stress testing methodology covers a range of risks and business areas and there are two types of stress testing currently in use:

- Sensitivity Analysis, which moves a single risk factor by a magnitude of shock. This method can be processed relatively quickly and can be used to form a first approximation and assessment of the impact.
- Scenario Analysis, which contains simultaneous moves in a number of market risk factors (e.g. equity prices, interest rates, foreign exchange rates and etc.). A stress test scenario analysis can be based on historical scenario, hypothetical scenario, forward looking scenario and second round/spill-over effect. Scenario analysis can be performed on a portfolio-driven approach or event-driven approach.

Risk Reporting and Monitoring

The Bank's risk appetite (i.e. risk tolerance) and business plans determine the amount of risk capital set aside (i.e. risk capacity) to support its operational and market activities as well as capital allocation to respective business units. This forms a basis in setting risk limits for business units.

RMD is responsible for the monitoring and timely reporting of risk exposures against the established risk limits. Any breaches in risk limits are subject to the exception escalation procedures that aim to rectify any excesses within a reasonable time frame and within the specified authority level. There is a formal process for risk reporting to the Group Managing Director, business units, relevant management/ board committees to facilitate the making of informed decisions and strategies. BRMC reviews and monitors any significant risk issues and reports to the Board.

Risk limits are reviewed on an annual basis or as and when required, to ensure their relevance with regards to the risk taking activities of the Bank and current banking regulations.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

4 CREDIT RISK

Credit risk refers to the potential risk of financial loss arising from defaults by counterparties in meeting their obligations. The Bank's exposure to credit risks arises primarily from share trading, share margin financing, securities borrowing and lending, corporate/inter-bank lending activities, bonds investment, foreign exchange trading, equity and debt underwriting as well as from participation in securities settlements and payment transactions.

Risk Governance

The management of credit risk is governed by a set of approved credit policies, guidelines and procedures to ensure that the overall lending objectives are in compliance with the internal and regulatory requirements. The risk management policies are subject to review by the BRMC, a sub-committee of the Board that reviews the adequacy of the Bank's risk policies and framework.

The Bank's credit risk framework is further strengthened through an established process for the approval and review of proposals that comprises the GMCC and the BCRC.

The GMCC represents the approving authority for credit and underwriting proposals, whilst the BCRC is the committee that reviews proposals that exceed specified limits and criteria, as well as to consider whether to reject the proposal or modify the terms of the proposal. The Bank recognises that learning is a continuous journey and is committed to enhancing the knowledge and skills set of its staff. It places strong emphasis on creating and enhancing risk awareness in the organisation. The Bank is supportive of credit officer in taking the Professional Credit Certification ("PCC") programme offered by the Asian Institute of Chartered Bankers ("AICB"). Upon attaining the PCC certification, credit officers are expected to demonstrate sound understanding of credit process and competence to undertake credit roles and responsibilities.

Credit Risk Identification and Measurement

(a) Corporate Credit and Financing

Credit evaluation is the process of analysing the creditworthiness of the prospective customer against the Bank's underwriting criteria and the ability of the Bank to make a return commensurate to the level of risk undertaken. A critical element in the evaluation process is the assignment of a credit risk grade to the counterparty. This assists in the risk assessment and decision making process. The Bank has developed internal rating models to support the assessment and quantification of credit risk.

A number of qualitative and quantitative factors are taken into consideration in the identification and analysis of a counterparty's credit risk. Each counterparty is assigned a credit rating which considers factors such as competitive position, operating performance, cash flow strength and management strength.

All corporate lending, underwritings and corporate debt securities investments are independently evaluated by the Bank's credit management function and approved by the relevant approving authorities based on the Authority Matrix approved by the Board.

(b) Stockbroking

For stockbroking brokerage business, daily management and monitoring of credit risk associated with securities brokerage is undertaken by Credit Control team to ensure compliance with approved policies and procedures of the Bank and regulatory requirements.

In addition, RMD reviews the overall stockbroking credit exposures and CMD assess/approve trading limit proposals that exceed specified limits. The assessment is based on clients and/or dealer's representatives risk profiles, creditworthiness, past trading records and pledged collaterals.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

(c) Share Margin

For share margin financing, all new margin applications as well as applications for increase in facility limits are subject to credit review by the Margin Operations. It will be forwarded to CMD for independent credit evaluation if the proposals exceed specified limits before recommending to the Approving Authorities. Credit risk exposures associated with share margin trading are reviewed and monitored closely on daily basis by designated staff from Margin Operations, Credit Management and independently by RMD, who will review amongst others, credit limit utilization, exposure to single security or client/ group of counterparty and equity positions against collateral.

Credit Risk Limit Control

The Bank employs various policies and practices to control and mitigate credit risk.

The Bank establishes internal limits and related lending guidelines to manage large exposures and avoid undue concentration of credit risk in its credit portfolio. The limits include single customer groupings, connected parties, geographical and industry segments. These risks are monitored regularly and the limits reviewed annually or sooner depending on changing market and economic conditions.

The credit risk exposure for derivatives due to potential exposure arising from market movements, and loan books are managed on an aggregated basis as part of the overall lending limits with customers.

Credit Risk Measurement

Credit risk grades

The Bank allocates each exposure to a credit risk grade based on a variety of data that is determined to be predictive of the risk of default and applying experienced credit judgement. Credit risk grades are defined using qualitative and quantitative factors that are indicative of the risk of default. These factors vary depending on the nature of the exposure and the type of borrower.

Credit risk grades are defined and calibrated such that the risk of default occurring increases exponentially as the credit risk deteriorates. For example, the difference in risk of default between credit risk grades 1 and 2 is smaller than the difference between credit risk grades 2 and 3.

Each exposure is allocated to a credit risk grade at initial recognition based on available information about the borrower. Exposures are subject to ongoing monitoring, which may result in an exposure being moved to a different credit risk grade. The monitoring typically takes into consideration a number of relevant factors when identifying and analysing of counterparty credit risk. These factors determines the credit rating under the Credit Risk Grading Policy, which considers factors such as competitive position, operating performance, cash flow strength and management strength. The Bank's leverages on its holding company's Affin Bank Berhad's models for loans, advances and financing and bonds.

Determining whether credit risk has increased significantly

The criteria for determining whether credit risk has increased significantly vary by portfolio and include quantitative changes in PDs and qualitative factors, including a backstop based on delinquency.

The credit risk of a particular exposure is deemed to have increased significantly since initial recognition if, based on quantitative modelling, the remaining lifetime PD is determined to have increased by more than a predetermined percentage/range.

Using expert credit judgement and, where possible, relevant historical experience, the Bank may determine that an exposure has undergone a significant increase in credit risk based on particular qualitative indicators that it considers are indicative of such and whose effect may not otherwise be fully reflected in its quantitative analysis on a timely basis.

As a backstop, the Bank considers that a significant increase in credit risk occurs no later than when an asset is more than 30 days or 1 month past due. Days or months past due are determined by counting the number of days or month since the earliest elapsed due date in respect of which full payment has not been received. Due dates are determined without considering any grace period that might be available to the borrower.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Determining whether credit risk has increased significantly (continued)

The Bank monitors the effectiveness of the criteria used to identify significant increases in credit risk via regular reviews to confirm that:

- the criteria are capable of identifying significant increases in credit risk before an exposure is in default; and
- there is no unwarranted volatility in loss allowance from transfers between 12-month PD (Stage 1) and lifetime PD (Stage 2).

Measurement of ECL

The Group and the Bank use three categories for financial instruments at amortised cost for recognising ECL:

| Category | Definition | Basis for recognising |
|------------------------------------|--|--------------------------------|
| Performing accounts (Stage 1) | <ul style="list-style-type: none"> • Financial assets that do not have significant increase in credit risk since initial recognition of the asset and therefore, less likely to default; • Performing accounts with credit grade 13 or better; • Accounts past due less than or equal to 30 days; or • For early control accounts that have risk or potential weakness which if left unchecked, may result in significant deterioration of repayment prospect and transfer to Underperforming status (Stage 2) or worse. | 12 months ECL |
| Underperforming accounts (Stage 2) | <ul style="list-style-type: none"> • An account with significant increase in credit risk since initial recognition and if left uncorrected, may result in impairment of the account within the next 12 months; • Accounts past due more than 30 days or 1 month but less than 90 days or 3 months; • Accounts demonstrating critical level of risk and therefore, credit graded to 14 and placed under Watchlist. | Lifetime ECL |
| Impaired accounts (Stage 3) | <ul style="list-style-type: none"> • Impaired credit; • Credit grade 15 or worse; • Accounts past due more than 90 days or 3 months. | Lifetime ECL - credit impaired |
| Write-off | <ul style="list-style-type: none"> • Evidence indicating that there is no reasonable expectation of recovery based on unavailability of debtor's sources of income or; • Assets unable to generate sufficient future cash flow to repay the amount. | Asset is written off |

The Bank has not used the loan credit risk exemption for any financial instrument for the financial year ended 31 December 2019.

Definition of default

The Bank considers a financial asset to be in default when:

- the borrower is unlikely to pay its credit obligations to the Bank in full, without recourse by the Bank to actions such as realising security (if any is held); or
- the borrower is past due more than 90 days on any material credit obligation to the Bank.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Term Structure of ECL Variables

The key inputs into the measurement of ECL are the term structure of the following variables:

- probability of default ("PD");
- loss given default ("LGD"); and
- exposure at default ("EAD").

These parameters are generally derived from internally developed statistical models and other historical data. They are adjusted to reflect forward-looking information as described above.

PD is the likelihood of a counterparty defaulting on its contractual obligations to a financial institution over a given time horizon and are estimates at a certain date, which are calculated based on statistical models. These statistical models are based on internally compiled data comprising both quantitative and qualitative factors. If a counterparty or exposure migrates between rating classes or changes in past due status, then this will lead to a change in the estimate of the associated PD. PDs are estimated considering the contractual maturities of exposures and estimated prepayment rates.

Credit risk grades and past due status are a primary input into the determination of the term structure of PD for exposures. The Bank's holding company collects performance and default information about its credit risk exposures analysed by type of product and borrower as well as by credit risk grading. For some portfolios, information from external credit reference agencies are also used.

The Bank leverages on its holding company's statistical models to analyse the data collected and generate estimates of the remaining lifetime PD of exposures and how these are expected to change as a result of the passage of time.

The lifetime PD is developed by applying a maturity profile to the current 12-month PD. The maturity profile looks at how defaults develop on a portfolio from the point of initial recognition throughout the lifetime of the loans. The maturity profile is based on historical observed data and is assumed to be the same across all assets within a portfolio and credit grade band. This is supported by historical analysis.

LGD is the magnitude of the likely loss if there is a default. LGD parameters are estimated based on the history of recovery rates of claims against defaulted counterparties. The LGD models consider the structure, collateral, seniority of the claim, counterparty industry and recovery costs of any collateral that is integral to the financial asset. LGD estimates are recalibrated for different economic scenarios. They are calculated on a discounted cash flow basis using the effective interest rate as the discounting factor.

EAD represents the expected exposure in the event of a default. The Bank derives the EAD from the current exposure to the counterparty and potential changes to the current amount allowed under the contract including amortisation. The EAD of a financial asset is its gross carrying amount. For lending commitments and financial guarantees, the EAD includes the amount drawn, as well as potential future amounts that may be drawn under the contract, which are estimated based on historical observations and forward-looking forecasts. For some financial assets, EAD is determined by modelling the range of possible exposure outcomes at various points in time using scenario and statistical techniques.

The 12-month and lifetime EADs are determined based on the expected payment profile, which varies by product type.

ECL is determined by projecting the PD, LGD and EAD at each future point on a yearly basis on individual exposure, or collective segment, and discounting these monthly expected losses back to the reporting date. The discount rate used in the ECL calculation is the original interest rate or an approximation thereof.

As described above, and subject to using a maximum of a 12-month PD for financial assets for which credit risk has not significantly increased, the Bank measures ECL considering the risk of default over the maximum contractual period (including any borrower's extension options) over which it is exposed to credit risk, even if, for risk management purposes, the Bank considers a longer period. The maximum contractual period extends to the date at which the Bank has the right to require repayment of an advance or terminate a loan commitment or guarantee.

Forward looking economic information is also included in determining the 12 month and lifetime PD, LGD and EAD.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Term Structure of ECL Variables (continued)

Where modelling of a parameter is carried out on a collective basis, the financial instruments are grouped on the basis of shared risk characteristics that include:

- product/instrument type;
- past due status;
- credit risk gradings;
- collateral type;
- date of initial recognition; and
- remaining term to maturity.

The groupings are subject to regular review to ensure that exposures within a particular group remain appropriately homogeneous.

There have been no significant changes in estimation technique or significant assumptions made during the reporting period that have material impact to the ECL.

Incorporation of forward-looking information

The Bank incorporates forward-looking information into both its assessment of whether the credit risk of an instrument has increased significantly since its initial recognition and its measurement of ECL. A "base case" view of the future direction of relevant economic variables as well as a representative range of other possible forecast scenarios are formulated.

This process involves developing two or more additional economic scenarios and considering the relative probabilities of each outcome. External information includes economic data and forecasts published by governmental bodies and monetary authorities.

The base case represents a most-likely outcome and is aligned with information used by the Bank for other purposes such as strategic planning and budgeting. The other scenarios represent more optimistic and more pessimistic outcomes. Periodically, the Bank carries out stress testing of more extreme shocks to calibrate its determination of these other representative scenarios.

The Bank has identified and documented key drivers of credit risk and credit losses for each portfolio of financial instruments and, using an analysis of historical data, has estimated relationships between macro-economic variables and credit risk and credit losses.

Predicted relationships between the key indicators and default and loss rates on various portfolios of financial assets have been developed based on analysing historical data over the past 3 years.

Credit risk monitoring

Corporate credits and large individual accounts are subject to ongoing monitoring, which may result in an exposure being moved to a different credit risk grade. This is to ensure that the credit grades remain appropriate and to detect any signs of weaknesses or deterioration in the credit quality. Remedial action is taken where evidence of deterioration exists.

Significant Increase in Credit Risk Process is in place as part of a means to pro-actively identify, report and manage deteriorating credit quality. Watchlist accounts are closely reviewed and monitored with corrective measures initiated to prevent them from turning non-performing. As a rule, Watchlist accounts are either worked up or worked out within a period of twelve months.

The Bank has established MFRS 9 - Stage Transfer Policy to provide guidance in determining significant increases in credit risk of financial assets. There are 3 stages to differentiate the credit risk of financial assets in conjunction with MFRS 9 standards: Performing Accounts (Stage 1), Underperforming Accounts (Stage 2) and Impaired Accounts (Stage 3).

Active portfolio monitoring as well as exceptions reporting is in place to manage the overall risk profile, identify, analyze and mitigate adverse trends or specific areas of risk concerns.

The Bank conducts post-mortem reviews on newly impaired loans to determine the key reason(s) and/or driver(s) leading to the account being classified as impaired, take appropriate remedial actions or measures and establish lessons learned to minimize potential or future credit loss from similar or repeat events.

In addition, an independent credit review is undertaken by RMD to ensure that credit decision-making is consistent with the Bank's overall credit risk appetite and strategy.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

4.2 Past Due And Impaired Loans, Advances And Financing

The Group and the Bank define a financial instrument as default, which is fully aligned with the definition of credit-impaired, when it meets one or more of the mandatory and/or judgmental indicators, which include amongst others, the following criteria:

(i) Mandatory indicators

- failure to make contractual payment within 90 days or 3 months of when they fall due;
- bankruptcy or winding up order issued;
- account turns fraud;
- internal rating deteriorated to default credit grade or worse;
- financial cashflow problems, classify as stressed company with evidence of business failure by Bursa;
- collateral coverage ratio falls below 100% (for share margin financing).

(ii) Judgemental indicators

- evidence of three or more judgemental events;
- account is past due or in excess of approved limit but less than or equal to 30 days;
- non compliance with financial covenants imposed and evidence of misuse and diversion of funds or monies;
- weakening in financial statements with sign of over-leveraging, erosion in capital base, deterioration in profitability and cash flow;
- credit deterioration such as adverse change in payment pattern and default in other related accounts;
- legal proceedings that have negative impact to the credit profile;
- sign of operational weakness or distributions arising from change in company's operations and management activities;
- company/director/management involved in fraudulent activities;
- consistently require margin call or unable to meet margin call (for share margin financing).

The Group and the Bank first assess whether objective evidence of impairment exists for financial assets which are individually significant. If the Group and the Bank determine that objective evidence of impairment exists, i.e. credit impaired, for an individually assessed financial asset, a lifetime ECL will be recognised.

Financial assets which are individually significant but non-impaired and not individually significant are grouped on the basis of similar credit risk characteristics (such as credit quality, instrument type, credit risk ratings, credit utilisation, customer types and other relevant factors) for collective assessment.

Write-off policy

The Group and the Bank write off financial assets, in whole or in part, when it has exhausted all practical recovery efforts and has concluded there is no reasonable expectation of recovery.

Indicators that there is no reasonable expectation of recovery include:

- (i) ceasing enforcement activity and
- (ii) where the Groups recovery method is foreclosing on collateral and the value of the collateral is such that there is no reasonable expectation of recovering in full.

PILLAR 3 DISCLOSURES

Modification of loans/financing

The Group and the Bank sometime renegotiates or otherwise modifies the contractual cash flows of loans to customers. When this happens, the Group and the Bank assess whether or not the new terms are substantially different to the original terms. The Group and the Bank do this by considering, among others, the following factors:

- If the borrower is in financial difficulty, whether the modification merely reduces the contractual cash flows to amounts the borrower is expected to be able to pay.
- Whether any substantial new terms are introduced, such as a profit share/equity-based return that substantially affects the risk profile of the loan.
- Significant extension of the loan term when the borrower is not in financial difficulty.
- Significant change in the interest rate.
- Change in the currency the loan/financing is denominated in.
- Insertion of collateral, other security or credit enhancements that significantly affect the credit risk associated with the loan/financing.

If the terms are substantially different, the Group and the Bank derecognise the original financial asset and recognises a "new" asset at fair value and recalculates a new effective interest rate for the asset. The date of renegotiation is consequently considered to be the date of initial recognition for impairment calculation purposes, including for the purpose of determining whether a significant increase in credit risk has occurred. However, the Group and the Bank also assess whether the new financial asset recognised is deemed to be credit-impaired at initial recognition, especially in circumstances where the renegotiation was driven by the debtor being unable to make the originally agreed payments. Differences in the carrying amount are also recognised in profit or loss as a gain or loss on derecognition.

If the terms are not substantially different, the renegotiation or modification does not result in derecognition, and the Group and the Bank recalculate the gross carrying amount based on the revised cash flows of the financial asset and recognises a modification gain or loss in profit or loss. The new gross carrying amount is recalculated by discounting the modified cash flows at the original effective interest rate (or credit-adjusted effective interest rate for purchased or originated credit-impaired financial assets).

Derecognition other than on a modification

Financial assets, or a portion thereof, are derecognised when the contractual rights to receive the cash flows from the assets have expired, or when they have been transferred and either (i) the Group and the Bank transfer substantially all the risks and rewards of ownership, or (ii) the Group and the Bank neither transfer nor retain substantially all the risks and rewards of ownership and the Group and the Bank have not retained control.

The Group and the Bank enter into transactions where it retains the contractual rights to receive cash flows from assets but assumes a contractual obligation to pay those cash flows to other entities and transfers substantially all of the risks and rewards. These transactions are accounted for as "pass through" transfers that result in derecognition if the Group and the Bank:

- i) Have no obligation to make payments unless it collects equivalent amounts from the assets;
- ii) Are prohibited from selling or pledging the assets; and
- iii) Have obligation to remit any cash it collects from the assets without material delay.

Collateral (shares and bonds) furnished by the Group and the Bank under standard repurchase agreements and securities lending and borrowing transactions are not derecognised because the Group and the Bank retain substantially all the risks and rewards on the basis of the predetermined repurchase price, and the criteria for derecognition are therefore not met. This also applies to certain securitisation transactions in which the Group and the Bank retain a subordinated residual interest/profit.

Regulatory reserve requirements

Pursuant to BNM Financial Reporting policy dated 27 September 2019, the Group and the Bank shall maintain, in aggregate, loss allowance for non-credit-impaired exposures and regulatory reserves of no less than 1% of all credit exposures, net of loss allowance for credit-impaired exposures.

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

4.3 Credit Risk Assessment Under Standardised Approach

In the assessment of credit risk under the Standardised Approach, the Bank is guided by BNM's pre-determined risk weights for certain classes of exposure that uses external ratings issued by an ECAI recognised by BNM.

The ECAIs recognised by BNM are as follows:

- Standard & Poor's Rating Services ("S&P")
- Moody's Investors Service ("Moody's")
- Fitch Ratings ("Fitch")
- Rating and Investment Information, Inc. (R&I)
- RAM Rating Services Berhad ("RAM")
- Malaysian Rating Corporation Berhad ("MARC")

The ratings of the above ECAIs are used in the credit risk assessment for the following classes of exposure:

- Sovereigns and Central Banks
- Banking Institutions
- Corporates
- Insurance Companies, Securities Firms and Fund Managers

If more than one rating is available for a specific exposure, the selection criteria as set out under the Single and Multiple Assessment in BNM RWCAF is applied in determining the relevant risk weight for the capital calculation. An exposure cannot be assigned with a risk weight that is lower than that of the sovereign risk of the country in which the asset is located. Where a rating is not available, the Bank follows the provisions stipulated under BNM RWCAF and deems the exposure as unrated.

PILLAR 3 DISCLOSURES

4.4 Credit Risk Mitigation Techniques Under Standardised Approach

The Bank uses a variety of techniques to mitigate credit risk, one of which is to evaluate and assess the creditworthiness and ability of a customer to service the debt facility without distress.

The Bank commonly obtains securities as collateral for loan and stockbroking trading portfolio. The Bank ensures that the collateral held is sufficiently liquid, legally effective, enforceable and regularly valued.

The Bank proactively manages its credit exposures and when weaknesses in exposures are detected either in individual exposures or in groups of exposures, prompt action is taken to mitigate the risks. These include steps to manage the exposure through discussion with the customers, borrowers, dealers' representatives or other relevant counterparties.

The Bank also uses legal agreements to reduce credit risk, including netting agreements which permits it to offset positive and negative balances with the same counterparties to minimise the exposure, financial guarantees and use of covenants in loan agreements.

Credit risk mitigation to address risk concentration takes several dimension, in which limits are set and monitored for individual and group counterparty level:

- Limits are set against all types of exposure to a counterparty name, in accordance with an agreed methodology for each exposure type, i.e. on and off-balance sheet exposures. This includes credit risk exposure on individual derivative transactions, which incorporates potential future exposures from market movements.
- Aggregate facility levels by counterparty are set and monitored in accordance to regulatory requirement. Any limit breaches are subject to escalation procedures.
- Credit risk management includes control and review on sector exposures (for corporate loans and debt securities) to reflect the Bank's risk appetite and managing exposures to high risk and more vulnerable sectors and unfavourable rated debt securities. Exposures are monitored to prevent excessive concentration of risk.
- The Bank has limited exposure to external country risks as most of its exposures are concentrated in Malaysia.

Collateral

The Bank maintains guidelines on the acceptability of specific classes of collateral. The principal collateral types for loans and stockbroking trading accounts are:

- cash or deposits;
- debt securities and equities; and
- land or properties.

To mitigate credit risk while dealing in derivative products, the Bank makes use of margining arrangements under International Swap and Derivative Association ("ISDA") agreements, in which both counterparties are required to post collateral in the form of cash or liquid securities permitted under the agreements with applicable haircut as appropriate to cover outstanding trading positions if margining thresholds stated under Credit Support Annex ("CSA") of the ISDA Agreement are breached.

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

4.4 Credit Risk Mitigation Techniques Under Standardised Approach (Continued)

It is the Bank's policy that collateral should be valued by an independent qualified source at inception. Collateral is reviewed on a regular basis in accordance with the credit policies applicable for Affin Bank Group, which will vary according to the type of exposures and collateral involved.

Tracking and controls over receipt and withdrawal of collaterals are maintained by a department independent from the business unit. For the collaterals in the form of securities, these are safeguarded by the custodian appointed by the Bank.

In order to minimise the credit loss, the Bank may seek additional collateral from the counterparty as soon as impairment indicators are identified for the relevant individual loans or when dealers' representatives have deficit cash collateral due to the deduction of cash collaterals against clients' overdue contra losses and interests under stockbroking trading accounts.

Guarantees

A guarantee is a legally binding contractual commitment made to the Bank that ensures that the guarantor is legally responsible to meet the obligations of a borrower in the event the borrower fails to pay.

PILLAR 3 DISCLOSURES

4.5 Off-Balance Sheet Exposure and Counterparty Credit Risk

Counterparty Credit Risk is the risk that the counterparty to a transaction could default before the final settlement of the transaction's cash flows. Transactions refer to contracts for financial instruments including derivative contracts and unsettled securities.

Credit risk arising from derivative transaction can be mitigated in several ways, including the use of:

- Collateral, which may be liquidated and satisfy the counterparty's obligations to the Bank upon closeout.
- Netting, which gives the Bank the right to close out and net all transactions under market standard master netting agreements such as the ISDA Master Agreement and CSA;

The above risk mitigation techniques are employed where possible and are explained as below:

Collateral

The Bank will negotiate for CSA under ISDA Master Agreement with selected counterparties on a case-by-case basis, where collateral is deemed necessary mitigator to the risk exposure. The terms of the CSA specified in each legal document are required to be approved by Compliance, Legal and Corporate Services Department. The nature of the collateral will be specified in the legal document and can be cash or selected government securities. Any non-cash collateral taken will be subject to a 'haircut' which is negotiated at time of signing of the collateral agreement and this will be largely based on liquidity and price volatility of the underlying collateral security.

A daily operational process takes place to calculate the mark-to-market on all trades and collateral captured under the CSA. Additional collateral will be called from the counterparty if total uncollateralised marked-to-market exposure exceeds the threshold and minimum transfer amount specified in the CSA. Additional collateral may be required from the counterparty to provide an extra buffer to the daily variation margin process.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

4.5 Off-Balance Sheet Exposure and Counterparty Credit Risk (Continued)

Bilateral Netting Agreement

The Bank further reduces its credit exposures to counterparty by entering into contractual netting agreement which creates a single legal obligation, covering all transactions that the Bank could have either a claim to receive or obligation to pay only the net sum of the positive (amounts owed by the counterparty) and negative (amounts owed by the Bank) mark-to-market values of all transactions including individuals in the event a counterparty fails to perform due to default, bankruptcy, liquidation or similar circumstances.

ISDA Master Agreement is the Bank's preferred agreement as it encompasses the largest number of products and thus provides the greatest cross-product netting benefits.

Credit Equivalent Limits

All credit exposures are approved either by approval of an individual facility (e.g. loan) or under a system of credit limits (e.g. derivatives, securities, stockbroking trading exposures). Credit exposure is monitored daily to ensure it does not exceed the approved credit limit. These credit limits are set either on notional exposure or pre-settlement credit exposure basis (e.g. for derivatives). Credit Equivalent Limit is an estimate of the potential exposure in the event that the counterparty default prior to settlement of the contract.

Collateral Requirement in the Event Of a Downgrade in Credit Ratings

A significant increase in the level of collateral would be required in the event of a credit ratings downgrade of the counterparties as allowable in the collateral agreements.

PILLAR 3 DISCLOSURES

5 SECURITISATION

The Group and the Bank currently do not have any securitisation activities.

6 MARKET RISK

Market risk is the risk of losses to the Bank's positions in financial instruments that are adversely affected by movements in market risk factors such as interest rates, foreign exchange rates, equity prices or commodity prices. The Bank's primary market risk exposures are in the trading and investment portfolios. The Bank's risk management process involves the identification and measurement, mitigation and control, monitoring and testing as well as reporting and review of risk.

Risk Governance

The Bank manages market risk through a comprehensive set of market risk controls. Key risk governance committees such as the ALCO and the BRMC establish and monitor controls with oversight by the Board of Directors. Market risk controls are established to ensure that the Bank's market risk profile remains within the boundaries of the Bank's risk appetite.

Policies and Approaches

The market risk policy of the Bank establishes the base standards on management of market and liquidity risks within the Bank. Together with the Bank's other existing policies, detailed guidelines/ methodologies in managing market and liquidity risks are laid down to cover the following areas:

- Market risk management principles;
- Market risk measurement methodologies;
- Trading and banking book classification;
- Valuation methodology;
- Market risk limit structure and management;
- Stress testing approach; and
- Internal controls and standards on validation of valuation models and market risk models

The principal measurement methodology used by the Bank to measure and control market risk exposures arising from the trading book portfolio is Value-at-Risk ("VaR"). VaR is a statistical measure of potential portfolio market value loss resulting from changes in market variables such as foreign exchange rates and interest rates, over a given holding period, measured at a specific confidence level. The Bank uses a variance-covariance method based on a 1-day holding period and a 99% confidence interval as its market risk VaR methodology. The VaR model is back-tested regularly to validate its robustness.

In addition, the Bank also uses other market risk controls, such as stop loss control, which sets a threshold on the net cumulative loss of the trading book over a defined period of time; and present value basis point, an interest rate sensitivity tool.

Stress testing complements the VaR framework in measuring market risks. Specifically, stress tests are conducted to attempt to quantify potential market risk losses arising from low probability abnormal market movements. Stress tests measure the changes in values arising from movements in relevant market risk factors based on past experience and simulated stress scenarios. For more detailed information, please see Stress Testing as discussed in Section 3 of this report.

Affin Hwang Investment Bank Berhad

PILLAR 3 DISCLOSURES

Risk Reporting and Monitoring

RMD is responsible in the monitoring and tracking of market risk limits based on the frequencies as set out in the Bank's relevant risk policies. Any limit excesses are reported in accordance with the exception escalation procedures, which may be followed by the appropriate remedial processes, if necessary.

The Bank also sets trigger limits in alerting any potential limit breaches and unusual movements of certain indicators to prompt early investigative action and escalation process. This is part of the daily trading disciplines on the trading book activities. Review of the market risk limits is conducted annually.

Market risk reports are submitted on periodical basis to ALCO and BRMC in order to facilitate their effective oversight of market risk management activities through evaluation of the nature, level and trend of market risk undertaken by the Bank.

Regulatory Capital Treatment

The Bank is adopting the Standardised Approach in calculating market risk RWA. Market risk is measured for interest rate and equity risks pertaining to financial instruments in the trading book and foreign exchange risk in both the trading and banking books, as well as options risk arising from underwriting activities; as defined under BNM RWCAF for regulatory capital computation purpose.

Affin Hwang Investment Bank Berhad

PILLAR 3 DISCLOSURES

7 OPERATIONAL RISK

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people or systems, or from external events. This includes risks such as fraud, physical damages, business disruptions, transaction failures, cyber threats, legal and regulatory breaches (including fiduciary breaches and Shariah non-compliances) as well as employee/agent (natural person) health and safety hazards. Operational risk is an unavoidable risk to the Bank as it is inherent in its business operations. Nonetheless, the Bank would manage the operational risk within an acceptable level in accordance with the Bank's Operational Risk Management Policy.

Risk Governance

The Operational Risk Management ("ORM") Governance structure warrants the Bank, Board and Business / Support Units to discharge their responsibilities in an aligned and formalised manner, thereby ensuring operational risks are being managed effectively and within the risk tolerance set by Board.

The Board is actively involved in the oversight of the operational risk management of the Bank through BRMC, which operates as a functional committee of the Board within its delegated authority by Board. The Board provides leadership, direction and oversight on the design and implementation of the Bank's ORM Policy. The Board approves the ORM policy, operational risk appetite and overall strategies that the ORM Policy is consistent with the Bank's risk tolerance level given the nature, complexity, materiality of the Bank's business operations.

BRMC reviews the ORM policy to ensure the policy is adequate and robust to address operational risk prior to recommendation to the Board for approval. BRMC also oversees and reviews reports in respect of the Bank's operational risks exposure.

CROC assists the Board and the BRMC in managing operational risk within the Bank, which includes overseeing and ensuring the effectiveness of the Bank's operational risk management infrastructure (including frameworks, policies, people, processes, information, methodologies and systems). Its key responsibilities include reviewing and deliberating on all operational risk events reported and effectiveness of the Bank's controls to manage operational risk, assessing and monitoring of significant operational risk exposures, providing direction for resolution of critical operational risk issues, evaluating vulnerabilities, threats and exposures relating to information assets and ensuring control and security measures are adequate to protect these areas, assessing overall disaster and business continuity effectiveness against the various scenarios of operational disruption and system-related breakdowns; and reviewing and ensuring compliance with all relevant laws and regulations.

The ORMU has a centralised functional role for operational risk management within the RMD and it is independent of any other functions and operations within the Bank. The ORMU, reporting directly to the Head of RMD, plays a key role in establishing the ORM Policy including identification, measurement, reporting and controls of operational risk, developing appropriate assessment and methodology to evaluate operational risk, supporting and guiding the Business/Support Units in the implementation of the Bank's ORM Framework and tools, particularly in promoting and inculcating 'risk awareness' culture across the Bank and acting as point of contact of operational risk issues with regard to interfacing with regulatory bodies.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

Policies and Approaches

Affin Hwang Investment Bank Berhad's ORM Policy, approved by the Board, governs the ORM framework and methodology used to ensure that operational risks within the Bank are identified, monitored and managed in a systematic and consistent manner.

Risk Measurement

Operational Risk Measurement Tools

The Bank has put in place comprehensive operational risk (OR) identification, assessment & measurement, control & monitoring and reporting of OR exposures through indicators and metrics such as Loss Event Database (LED), Key Risk Indicators (KRIs), Risk and Control Self Assessment (RCSA) and Key Control Standard (KCS).

The Bank also adopts the Group Product Programme which sets out the minimum standards concerning introduction of new products as well as the maintenance of Product Programs across all Business Divisions within Affin Bank Group.

Each new product or service introduced that results in a material change to the risk profile of the Bank is subject to a rigorous risk review and signoff process where all relevant risks are identified and assessed by departments independent of the risk-taking unit proposing the product. Variation that constitutes a material change in the risk profile of existing products is also subject to a similar process. RCSA complements the risk assessment on operational risk as required by the Product Programme. Thus, RCSA will be performed by the department which the product or service originate or belongs to, to identify and assess the inherent operational risk related to the new product or service. The resulting risk profile will subsequently be submitted to the RMD for review and consideration prior to submission to the relevant management and/or board committee for approval.

There are other major operational risk mitigation programmes and Business Continuity Management that applies to all Business/Support units and branches in all locations.

Risk Reporting and Monitoring

RMD is responsible for the monitoring and tracking of operational risk based on the information obtained through the ORM tools. Exception reports are produced on a regular basis, highlighting material operational risk related issues to CROC and BRMC as well as Group Operational Risk Management Committee ("GORMC") for risk monitoring and appropriate level of management decision making.

Regulatory Capital Treatment

The Bank adopts the Basic Indicator Approach in calculating the operational risk RWA as at 31 December 2019.

Affin Hwang Investment Bank Berhad

PILLAR 3 DISCLOSURES

8 EQUITIES IN THE BANKING BOOK

The Bank's banking book equity investment consists of:

- Investments held for yield and/or long term capital gains; and
- Strategic stakes in entities held as part of growth initiatives and/or in support of business operations.

Investment in equity or Collective Investment Scheme ("CIS") investments are subject to limits which are set based on the Bank's total capital and/or notional limits.

Accounting for Equity or CIS Holdings in the Banking Book

Different equity investment positions have different accounting treatments depending on the nature of the exposures. Where the equity investment is not subject to the significant influence or joint control of the Bank, it is held as a direct investment, which is classified as either fair value through other comprehensive income ("FVOCI") or fair value through profit or loss ("FVTPL") in accordance to MFRS 9 (previously classified as AFS in accordance to MFRS 139).

FVOCI and FVTPL securities are initially stated at fair value except for investments in equity/CIS that do not have a quoted market price in an active market and whose fair value cannot be reliably measured, will be stated at cost. Consistent with the valuation of financial instruments, fair value of equity securities is initially and subsequently determined using, where available, quoted prices in active markets or valuation techniques where quoted prices in active markets are not available.

The Group and the Bank subsequently measure all equity investments at fair value. Where the Group's and the Bank's management have elected to present fair value gains and losses on equity investments in FVOCI, there is no subsequent reclassification of fair value gains and losses to profit or loss following the derecognition of the investment. Dividends from such investments continue to be recognised in profit or loss as other income when the Group's and the Bank's right to receive payments is established.

Changes in the fair value of equity investments at FVTPL are recognised in "net gains and losses on financial instruments" in the income statement.

PILLAR 3 DISCLOSURES

9 INTEREST RATE RISK IN THE BANKING BOOK

The Bank is exposed to interest rate risk in banking book ("IRRBB") arising from differences in the repricing mismatch between rate sensitive assets and liabilities. The Bank measures and monitors the IRRBB exposures through the short-term Net Interest Income ("NII") sensitivity and changes in the Economic Value of Equity ("EVE").

Policies and Approaches

The management of IRRBB is governed under the Asset Liability Management Policy.

The objective of the management of IRRBB is to maintain an acceptable mismatch in interest-sensitive assets, liabilities and derivative financial instruments in the banking book, while achieving a desired level of earnings.

Risk Measurement

In managing IRRBB, both the earnings and economic value approaches are adopted. Interest-sensitive assets, liabilities and derivative financial instruments are grouped into time buckets based on the earlier of remaining period to maturity or next re-pricing; before a parallel interest rate shock is applied to arrive at the sensitivity shocks on earnings and economic value.

The earnings approach focuses on the impact of interest rate movement on the Bank's near term earnings. The economic value approach provides a more comprehensive view of the impact of interest rate movements on the economic value of the Bank's overall positions.

Risk Reporting and Monitoring

The impact of interest rate movements quantified using the economic value approach is subject to approved limit and monitored on daily basis. Review of the risk limit is conducted annually.

Impact on earnings and economic value are periodically reported to ALCO and BRMC to facilitate their effective oversight of interest rate risk in banking book. Any non-compliance is subject to a set of escalation procedures.

Affin Hwang Investment Bank Berhad

(Incorporated in Malaysia)

PILLAR 3 DISCLOSURES

The following table depicts the sensitivity shocks on earnings and economic value of the Bank's positions in banking book, to a parallel interest rate shock of +/- 100 basis points ("bps"):
